# Brane duals of scale-separated AdS vacua

Fien Apers*[1]

[1]IFT Madrid – Spain

**Abstract**

I will discuss a method to study the brane duals of scale-separated AdS vacua. I will apply it to the DGKT-CFI AdS4 vacua and to similar AdS3 flux vacua, with the goal of testing the validity of the resulting singularities and the decoupling of their brane duals. I will also comment on the decoupling of KKLT AdS vacua.
